

SENIOR BACKEND ENGINEER (PYTHON)

Meridian Labs - Athens or remote within EU

ABOUT THE ROLE

We are building the platform that powers logistics for mid-sized European retailers. You will join a team of six engineers and own services that move real money and real parcels.

REQUIREMENTS

Strong commercial experience with Python, ideally with FastAPI or a comparable async framework.

Proven experience designing and operating PostgreSQL databases at scale, including query optimisation and schema migration.

Production experience with Kubernetes for container orchestration and workload scheduling.

Solid understanding of event-driven architecture and message brokers.

Experience building and maintaining CI/CD pipelines.

Hands-on experience running services on a major cloud provider, preferably AWS.

Experience with observability: structured logging, metrics and distributed tracing.

Demonstrated experience mentoring engineers and raising the standard of code review within a team.

NICE TO HAVE

Experience with Terraform or another infrastructure-as-code tool.

Familiarity with GraphQL APIs.

Exposure to the logistics or payments domain.

WHAT WE OFFER

Competitive salary, equity, and a genuine four-day-week pilot starting this year.

Meridian Labs is an equal opportunity employer.
